

The miracles of science™

TechSage and DuPont Imaging Technologies introduce the new SPINJET 5500, a fully automated two sided inkjet printing solution.

October 2, 2002

The SPINJET keeps up with HP Designjet developments

A new line of 5000 printers has been released from HP: The Designjet 5500 series. This new printer series is improved in several areas and is already fully compatible with the new SPINJET 5500:

- Increased productivity (up to 2 times faster than the Designjet 5000 series!)
- Greater ink and media flexibility (for single-sided solutions)
- Additional print mode – now 4 options: max quality, productivity, production (new) and max speed.
- New media heater (avoid media deformation when using paper-based media)
- Intelligent printing to simplify workflow
- Larger hard disk drive (now 40.0 GB)

The SPINJET 5500 is fully compatible with the new HP Designjet 5500 product line from HP.

A proven system

As shipment has commenced for the SPINJET 5500 from TechSage, the SPINJET system has already proved its reliability with an install base of more than 750 units world wide – a true market leader for fully automatic double-sided imposition proofing.

The SPINJET 5500 is a new version of the currently selling SPINJET 1000 series and an add-on to the HP Designjet 5500 and 5000 series from Hewlett-Packard. The SPINJET 5500 supports the 42" HP and is

the only fully automatic 60" double-sided proofer on the market

- With the release of the Designjet 5500 the SPINJET 5500 is the **fastest** double-sided solution on the market.
- The SPINJET 5500 can print **up to 4 meters** for banner and poster production and **up to 2.5 meters** for imposition proofing, thus servicing customers with needs for both imposition **proofing** and/or **signage** production.
- The SPINJET 5500 is available in **both 42" and 60"** models and is compatible with both the Designjet 5000 and **5500** models from HP.
- The SPINJET 5500 is a dual purpose, dual sided, **non-impact** solution for digital imaging.

Extended media program

In partnership with DuPont Imaging Technologies, special media for use of the SPINJET system has been developed for imposition proofing. The DuPont Dylux® Digital media is a two side specialty coated media and is available for the 42" and 60" models. New DuPont media types for double-sided production of signs, banners, and point of purchase applications that can be printed on the SPINJET 5500 are under development.

Unique interface software – SPINFLOW 5000

An all-new version of SPINFLOW software comes with the new the SPINJET 5500 system. As an added feature ICC profiling can be applied in SPINFLOW 5000. The new SPINFLOW 5000 software is also fully compatible with high end RIP and color management systems such as the DuPont Cromapro™ XP inkjet color proofing solution. Detailed software and system specs can be downloaded from the SPINJET website.

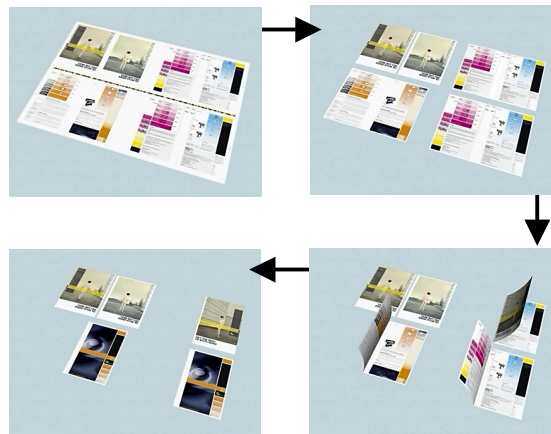

Availability

The SPINJET 5500 is available for shipment. Please contact TechSage Sales (sales@techsage.dk) for information on your nearest dealer or visit the website www.spinjet.com for further details on how you can:

GET THE BEST OF BOTH SIDES – WITH THE SPINJET 5500.
